CI / CD PIPELINE STATUS

Vercel Deployment
commit 94e2f3c · main
● READY

Health Check
Fixed: caching + error filters
● REDEPLOYING

E2E Tests
Secrets added · test user seeded
● REDEPLOYING

What Was Fixed

- ✔️ GitHub secrets set: TEST_EMAIL, TEST_PASSWORD, BASE_URL

✔️ Playwright browser cache added (saves ~4 min per run)

✔️ Health check timeout increased 10m → 20m

✔️ Screenshot uploaded as artifact on every run
- ✔️ E2E test user created in Supabase (e2e-test@fundiapp.co.za)

✔️ npm module cache added (saves ~2 min per run)

✔️ Console error filter expanded (PostHog, WebSocket, CSP noise)

✔️ Hearts column migration applied to production

RECOMMENDED A/B TESTS — RUN THESE NOW

Onboarding Length

Metric: onboarding completion rate · 76% currently drop off

A (CONTROL)

Full 6-step onboarding (current)

B (TEST)

3-step minimal: email → goal → username. Skip age/quiz

Streak Reminder Timing

Metric: 7-day retention · all users have streak = 1

A (CONTROL)

No push notification (current)

B (TEST)

Push at 7pm SAST: "Your streak is at risk — 1 lesson keeps it alive"

First Lesson CTA

Metric: lesson start rate within 5 min of signup

A (CONTROL)

Show all courses on Learn tab

B (TEST)

Auto-open first lesson immediately after onboarding completes

Daily Goal Default

Metric: daily goal hit rate & DAU

A (CONTROL)

Default: 200 XP/day

B (TEST)

Default: 50 XP/day (1 lesson). Feels achievable. Upsell later.

STRATEGIC DECISIONS — BASED ON YOUR DATA

What the data is telling you right now

Fix onboarding first, not features.

76% of signups (13 of 17 in 14 days) never finish onboarding. That's your entire top-of-funnel leaking. Every new user you acquire is wasted until this is resolved. Run A/B test #1 immediately.

Your power user is real proof.

"doctor" has 1,445 XP, 25 lessons, 6 perfect scores. This person loves the product. Find out who they are and get a testimonial/case study. Use their journey as your marketing hook.

Streaks aren't working yet.

Max streak = 1 across all users. This means no one is coming back the next day. The streak system exists but isn't creating habit. Implement the push notification A/B test (test #2) this week.

Goals are split: invest vs. save for home.

These require completely different lesson paths and emotional hooks. Consider personalized home screens based on goal — the "investor" user should see different first lessons than the "home buyer".

3 users did 0-5 lessons, 1 user did 25.

There's a cliff after lesson 5. Audit what's at lesson 5 — is there a difficulty spike? A boring topic? Add a "You're 20% done with this course!" milestone at lesson 5 with XP bonus.

You have 17 signups in 14 days with no marketing.

That's organic traction. This will multiply fast once you start promoting. Get the funnel fixed before you scale — otherwise you'll waste every rand spent on acquisition.
