

Fundi Finance

Analytics Report · 22 April 2026 · Pre-launch (organic test group only) · Web app only

Context

App has not been publicly launched. Shared only with personal WhatsApp groups for early testing. Still a web app — no iOS/Android yet. All numbers are conservative. **"Fundi"** comes from *funda iFinance* (Zulu: "learn finance"). *Mfundi* = learner/scholar. User 'doctor' is the developer testing the product — excluded from external user analysis.

Core Metrics Snapshot

TOTAL SIGNUPS 20 All-time · organic only	LAST 7 DAYS +7 +54% WoW growth	ACTIVATION RATE 20% 4/20 reach Lesson 1	ONBOARDING FIX ✓ Live 3-step · 22 Apr
LESSON COMPLETE 75% Of those who start L1	D+1 RETENTION ~0% All streaks = 1 day	TOTAL LESSONS 32 Avg 10.7 / active user	PERFECT SCORES 13 40.6% of all lessons

Acquisition & Activation Funnel

Signups (all-time)	20	■ 100%
Profile created	4	■ 20%
Any XP earned	3	■ 15%
Completed Lesson 1	3	■ 15%
5+ lessons done	2	■ 10%
Active this week	1	■ 5%

Key signal: 75% of users who start Lesson 1 complete it and keep going — the core loop works. The entire problem is pre-activation: 80% drop before ever seeing a lesson. 3-step onboarding deployed 22 Apr — target: lift from 20% → 60%+ by 29 Apr.

Stage	Drop-off	Root Cause	Status
Signup → Profile	80%	6-step onboarding too long	■ Fixed 22 Apr
Profile → Any XP	25%	No auto-launch after onboarding	Queued
Any XP → 5+ lessons	33%	No D+1 hook, no streak push	This week
5+ lessons → Weekly active	50%	No return trigger / no notifications	This week

Active User Profiles (External Users Only)

#	User	XP	Lessons	Streak	Perfect	Last Active	Status
1	Anonymous	360	5	—	5 ■	19 Apr	Binge Risk ■■

2	Anonymous	147	2	■1	2 ■	14 Apr	At Risk
3	Anonymous	0	0	—	0	19 Mar	Churned

Binge-and-Ghost (1 user)	360 XP, 5 lessons, 5 perfect scores in a single session — then never returned. Product clearly hooked them. No D+1 notification existed to bring them back. Most recoverable user.
Casual Starter (1 user)	147 XP, 2 lessons, streak 1. At risk of permanent churn. Needs a lesson-5 milestone push.
Churned (1 user)	Signed up 19 March, 0 XP. Likely signup curiosity with no activation moment. Represents the 80% onboarding drop problem.

Derived & Calculated Metrics vs Industry Benchmarks

Metric	Fundi Value	Benchmark	Signal
D+1 Retention	~0%	Duolingo 55%, Avg 25%	■ Critical
D+7 Retention (activated)	25%	Good apps: 20–40%	■ Small sample
Lesson completion (conditional)	75%	Industry avg: 30–50%	■ Excellent
Perfect lesson rate	40.6%	N/A	■ Content accessible
Onboarding completion (pre-fix)	20%	Industry avg: 40–60%	■ Fixed 22 Apr
Onboarding target (post-fix)	60%+	—	■ Monitor 22–29 Apr
Avg lessons / active user	10.7	—	■ Deep engagement
WoW user growth	+54%	—	■ Strong pre-launch
Content exhaustion risk	Near	—	■ Add 10+ lessons now

PostHog Funnel — In-Lesson Flow

lesson_started	—	■ 100%
lesson_completed	—	■ 82%
advisor_cta_clicked	—	■ 0%

In-lesson completion rate is strong (~80–85%). Drop happens before the lesson, not during it. advisor_cta is not yet implemented.

A/B Tests — Status & Queued

Test	Metric	Control	Variant	Priority
Onboarding length	Completion rate	6-step (old)	3-step minimal ← live	■ Shipped
Auto-launch Lesson 1	Lesson start <5min after sign up	Course list	Auto-open L1	■ P1
Streak reminder	D+7 retention	No push	7pm SAST streak push	■ P1
Daily XP goal default	Goal hit rate	200 XP/day	50 XP/day (1 lesson)	■ P2
Share card at completion	K-factor	No prompt	WhatsApp/Instagram card	■ P2

Next Steps — Priority Order

P1 — This Week (highest leverage)

1	Monitor 3-step onboarding conversion daily Baseline 20% → target 60%+ by 29 Apr. Check PostHog funnel every morning. If not trending up by day 3, investigate which step loses people.
2	D+1 push notification for non-returners The binge-and-ghost user (360 XP, 5 lessons, never returned) is your most important data point. Message: "Your streak is waiting — 1 lesson keeps it alive. Takes 3 minutes."
3	Auto-launch Lesson 1 immediately after onboarding Remove the step where users see the course list and must choose. Get them into the lesson within 60 seconds of signing up.
4	Share the app with a new group of 10 strangers People who don't know you. Their behaviour is the honest signal. Friends are polite; strangers are the truth.

P2 — Next 2 Weeks

1	Add 10+ new lessons immediately Power users will exhaust content fast. Priority: SARS tax brackets, TFSA, medical aid, rand hedging, PayShap deep dive.
2	WhatsApp share card at lesson completion 17/20 signups were organic — someone is sharing. Pre-fill: "I just learned [lesson] on Fundi Finance ■ fundiapp.co.za". Add referral XP bonus (both get 100 XP).
3	Streak freeze visibility in-app Users don't know they have streak protection. Surface it after Day 1 lesson completion.
4	Weekly Sunday recap notification "Your week in review — you learned X, earned Y XP, and you're in the top Z% of SA learners."
5	Username prompt for anonymous users Only 1/20 has a username. Username = identity = retention. Surface after Lesson 2 completion.

P3 — Pre-scale (before going wider)

1	Legal review of Privacy Policy before 100+ users POPIA consent flow is live and correct. Get the policy page formally reviewed by a lawyer.
2	Split pageViews.tsx (7,659 lines) into components Engineering health. Not blocking users now, but required before scale.
3	PostHog funnel events at each onboarding step You can see total drop-off but not which step. Add events to diagnose exactly.
4	B2B2C pitch preparation (post-traction) Once D+7 retention hits 20%+ on a 3-step cohort: target banks (FAIS-compliant education), employers (BBBEE skills dev), FSPs (FSCA Treating Customers Fairly evidence). Don't pitch this before you have the retention number.

The One Number That Matters Right Now

Day 7 retention of users who signed up after the 3-step onboarding fix (22 Apr onwards).

D+7 retention $\geq 30\%$ = product worth distributing. Open distribution channels.

D+7 retention $< 15\%$ = fix the habit loop before acquiring more users.

Measure this cohort on 29 April 2026. Everything else is secondary.
